

WAP that prompts the user to enter the names and ages of two friends, and displays which friend is older or if they are the same age.

PROGRAM:-

```
#include<stdio.h>
int main()
{
    char name1[100],name2[100];
    int age1,age2;
    printf("Enter name and age of person 1 :");
    scanf("%s %d",&name1,&age1);
    fflush(stdin);
    printf("Enter name and age of person 2 :");
    scanf("%s %d",&name2,&age2);
    fflush(stdin);

    if(age1>age2)
    {
        printf("%s is older than %s",name1,name2);
    }
    else if(age2>age1)
    {
        printf("%s is older than %s",name2,name1);
    }
    else
    {
        printf("Both are same age");
    }
}
```
