

AHC constructions constructed a high rise building which has 50 floors, families who are residing at even floors has beach view and families who are residing at odd floors has forest view, WAP to read the floor number and display which view the floor has.

---

PROGRAM:-

```
#include <stdio.h>
int main() {
    int floor;
    printf("Enter your Floor number: ");
    scanf("%d", &floor);
    if (floor > 50)
        printf("We have only \"50 floors\\n\\n");
    else if (floor % 2 == 0)
        printf("Heyy you have \"Beach View\" for your Flat.\\n");
    else
        printf("Heyy you have \"Forest View\" for your Flat.\\n");
}
```

```
Enter your Floor number: 10
Heyy you have "Beach View" for your Flat.
```

-----

```
Enter your Floor number: 45
Heyy you have "Forest View" for your Flat.
```
